PROJECTS

Sundate - Dating Platform   Oct, 2022 to June 2023

Technologies: React JS, Node JS, MongoDB

- Developed core components of the customer-facing website using React.js, ensuring a smooth and intuitive user experience.

- Admin panel development, allowing for efficient management of users, profiles, and platform content.

- REST APIs development for Android, iOS, and web application, providing consistent data flow and functionality across platforms.

Tappetite - Order Food Online   June, 2018 to July 2019

Technologies: React JS, Node JS, MongoDB, Socket.IO

- Developed the user and admin panel from scratch using React.js, ensuring an intuitive interface and seamless functionality.

- Designed and implemented REST APIs using Node.js and MongoDB for efficient data handling across android and web application.

- Integrated real-time order tracking and notifications using Socket.IO, enhancing the user experience with live updates on food orders.

Afly India - Url shorter & Admin CRM   Jan, 2020 to March 2023

Technologies: React Native, Cake PHP, MySQL

- Developed a comprehensive Android application leveraging React Native technologies; integrated features for URL shortening and performance tracking which led to a 50% reduction in user wait times for data retrieval.

- REST APIs development with Cake PHP to handle URL shortening, user management, and business analytics.

- Development of Admin panel providing real-time insights into metrics like views, impressions, and payments, improving decision-making for the business.

- Integrated features for managing users, links, and payments, offering full control over the platform's operations through a streamlined interface.

- Optimized backend to ensure fast data retrieval and efficient management of large datasets.
